

This information is current as of the date of publication but is subject to change.

argenx supports optionality for patients by providing 2 routes of administration - VYVGART® (efgartigimod alfa-fcab) for intravenous use via a vial and VYVGART Hytrulo® (efgartigimod alfa and hyaluronidase-qvfc) for subcutaneous injection via a vial that is administered by a healthcare provider (HCP) or a prefilled syringe that may be self-injected.

Considering all available coverage options will help you and your patient identify the therapy that best meets your patient's needs. Review the information below to help you understand how different types of health plan benefits and other factors generally influence access to prescribed therapy.

Understanding pharmacy benefit vs medical benefit

Pharmacy benefit

Medical benefit

	Drug formulation	Self-administered injections or oral treatment ¹	Intravenous infusions or injections administered by an HCP ²
	Acquisition	Patient receives the product directly from the specialty pharmacy	Provider acquires the product from specialty distributor or specialty pharmacy
	Treatment setting	Patient's home or other appropriate location ^a <small>^aAssuming compliance with instructions for use</small>	HCP office, infusion center, outpatient hospital facility, home infusion
	Insurance coverage²	Determined by pharmacy benefit manager or health plan's drug formulary and policy	Determined by medical policy
	Medicare coverage	Medicare Part D ³	Medicare Part B, Part B with Medigap coverage, or Part C/Medicare Advantage coverage ⁴
	Patient cost²	Co-pay or co-insurance for drug	Co-pay for office or hospital visit; co-insurance for drug
	Billing²	Specialty pharmacy manages billing and dispensing; claims processing occurs in real time	HCP/site of care has option to buy and bill ^b ; claims processing occurs after treatment is administered
	Insurance information	Prescription and medical benefit information may be on separate cards; ensure you collect both. Some Medicare patients may have a supplemental insurance card	

^aInvolves the HCP/office purchasing specialty drugs and managing an internal stock of specialized treatments. These medications can then be allocated to patients and administered onsite by HCPs within the practice or an alternative site of care such as an infusion center, etc. This is an alternative option to using a specialty pharmacy or other collaborator. The buy-and-bill process involves the HCP purchasing, storing, and then administering the product to a patient.²

argenx has a dedicated field team to provide education support to HCPs and their offices.

**Territory Business
Manager**

**My VYVGART Path
Patient Support Team**

**Field Reimbursement
Manager**

Territory Business Managers are your primary point of contact for argenx products

- Provide education and resources on argenx products and services
- Connect HCPs and offices with an argenx field team member as needed

Enroll your patients in My VYVGART Path for a patient-specific benefits verification that provides ways patients can access prescribed therapy

My VYVGART Path Patient Support Team can help with the following:

- Assist with benefits investigations, prior authorizations, and financial assistance
- Identify appropriate site of care for HCP-administered products
- Ensure prescription for prefilled syringe is delivered to contracted in-network specialty pharmacy
- Provide disease education and training to enrolled patients
- Provide personalized support through nurse case managers

Field Reimbursement Managers can provide education and support access and reimbursement for argenx products

- Provide general access and reimbursement education to HCPs and offices
- Provide case-specific support to assist in getting patients on treatment^c
- Educate on My VYVGART Path resources
